STREAMLINE YOUR WORKFLOW

Workflow Services by ImageMover is a technology platform that enables pharmacists to perform point-of-care clinical services in the retail pharmacy setting. In order to practice at the top of their license, pharmacists have to follow complex protocols that are often laden with paperwork. Workflow Services creates streamlined digital processes and decision support tools to help pharmacists perform low-acuity healthcare services while remaining compliant with federal and state regulations.

The Community Pharmacy Platform includes clinical workflows for:

- Vaccines
- Point-of-Care Treatment Protocols
  - COVID prescription, e.g. Paxlovid
  - Flu prescription, e.g. TamiFlu
  - Strep prescription, e.g. Amoxicillin
  - Contraceptives prescription
- Statin therapy for diabetics
- Tobacco cessation
